India is an agrarian economy, known largely for its agricultural produce, but the careless loss of a significant percentage of the Indian agricultural produce is a staggering, un-affordable and preventable waste. Unfortunately, tons of the agriculture produce is lost to pests and rot, due to poor conditions of transportation and storage: these are often either lacking, or of poor quality. Lack of a facility for farm storage forces the farmers to sell immediately, flooding the market with unnecessary surplus, which goes to waste every day. Centre for Agri Logistics aims at enabling farmers in strengthening their capacity and understanding towards use of better storage, prevent wastage and attain good prices.

**Objectives**

- To orient the farmers, traders and millers about agri logistic facilities and advantages,
- To promote the adoption of new technologies by warehouse executives,
- To orient the farmers, farmer producer organizations about the new technologies and prevailing policies benefits.

**Proposed programmes**

- Workshops & Seminars
- Training Programmes
- Awareness Programmes
- Case Studies
- Research Studies
- Consultancy
- Evolving models
- Policy advocacy.

**Stakeholders**

- Farmers and Farmer Producer Organizations
- Managers
- Warehouse Executives
- Researchers
- Agri Logistics Companies
- Public Private Organizations
- Non Government Organizations
